

Appian and Amazon Web Services for Public Sector

Government agencies face many of the same modernization imperatives as private sector organizations, such as the need to deploy new features and applications securely and quickly, work together more efficiently, and act on the right information with the right people at the right time. Strict regulations, highly specialized operational requirements, and heightened demands to do more with less only compound these challenges

Appian and Amazon Web Services (AWS) is a relationship designed for government missions. AWS, the creator of AWS GovCloud (US), is the world's most comprehensive and broadly adopted cloud platform. Appian is an AWS Advanced Partner with an industry-leading low-code platform and more than 20 years' experience working with government organizations. Agencies can find the Appian Low-Code Platform on AWS GovCloud (US).

Appian and AWS solutions enable government agencies to transition to the cloud, build and scale workflows and applications, and align technology with mission needs in a way that's fast, flexible, and future-focused.

Low-code applications and orchestration over AWS infrastructure.

In the United States, government customers leverage AWS GovCloud (US) and the Appian Low-Code Platform, which is built on complete automation, to quickly build and deploy applications and workflows for:

- **Case management.** Manage any case type, structured or ad hoc, including process-to-decision activities, service requests, incident management, and investigation cases.
- **Acquisition management.** Streamline all steps in the procurement process, from evaluating vendors to writing contracts.
- **Logistics and asset management.** Coordinate and orchestrate functions such as employee recruiting and training, contractor onboarding, security card management, and background investigations.
- **Regulatory compliance.** Equip even the most complex regulatory business processes with an enterprise-wide view and full audit traceability.
- **Constituent services.** Increase customer satisfaction with government programs and services by adding efficiency and ease to grants management systems, claims processing, intelligent contact center support, and more.

Public sector modernization starts here.

Build and scale with confidence through security, flexibility, and compliance.

A powerful collaboration for a future-proof government.

Appian applications and workflows combine the best aspects of commercial off-the-shelf solutions and custom development. They're easy to customize, integrate seamlessly with legacy systems, and leverage a wide range of automation technologies. The Appian automation suite extends beyond robotic process automation (RPA) to include artificial intelligence (AI), intelligent document processing (IDP), business rules, and smart services.

An intuitive, user-friendly interface, empowers agencies to select the best applications and workflows for their specific use case. These applications and workflows natively integrate into an agency's own ecosystem of AWS products and work with hundreds of AWS services in key technology areas such as: analytics, application services, application deployment and management, IoT, AI, security, and hybrid cloud, as well as database, developer, mobile, and enterprise applications.

Smoothly move to—and work in—a cloud built for federal use.

[AWS GovCloud \(US\)](#) gives federal agencies the flexibility to architect secure cloud solutions and support mission-critical workloads in accordance with a wide array of compliance regimes, including:

- The FedRAMP High Baseline.
- The US Department of Justice's Criminal Justice Information Systems (CJIS) Security Policy.
- US International Traffic in Arms Regulations (ITAR).
- Export Administration Regulations (EAR).
- The US Department of Defense's Cloud Computing Security Requirements Guide (SRG) for Impact Levels 2, 4, and 5.
- FIPS 140-2.
- IRS-1075.

As a longtime AWS Partner, Appian helps agencies architect, operate, and manage workloads in AWS GovCloud (US), with secure architecture that complies with a wide range of federal standards and certifications: FedRAMP, FISMA, HIPAA, SOC 2, SOC 3, and PA for DoD IL5.

The Appian Low-Code Platform enables agencies to maintain operations throughout migration, bringing people, bots, data, and systems together into a single workflow and empowering the swift development and modification of applications.

Seamlessly connect to a world of solutions.

Federal agencies can use the Appian Low-Code Platform, available in AWS GovCloud (US), to easily access hundreds of products and services with a range of pre-built and industry-standard connectors offered through the Appian AppMarket. Open APIs and out-the-box connectivity make custom integrations easy—with little to no coding required.

Appian is the unified platform for change. The Appian platform is open, enterprise-grade, and trusted by industry leaders for their most mission-critical workflows and applications.
