Appian | LOW-CODE LIBRARY

QUICK APPS AND APPLICATION BUILDER

CREATE AN ENTIRE APPLICATION IN JUST MINUTES... NO CODING REQUIRED.

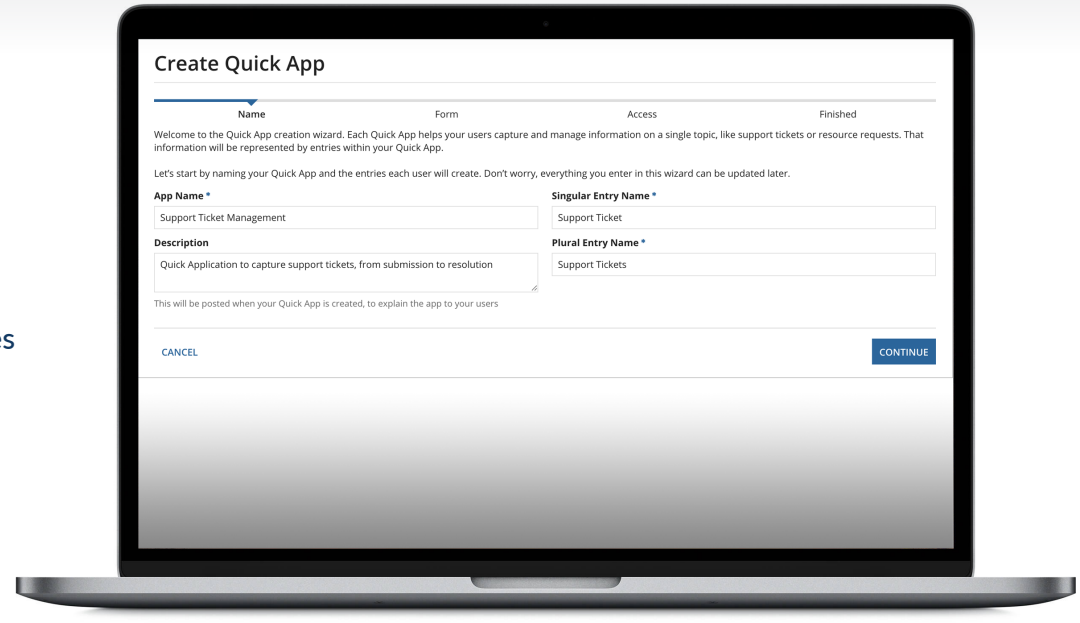
There are plenty of software products out there that say you can build applications fast. While they might mean fast is a few months or weeks, with Appian's Quick Apps, we are talking fast in minutes. Go from idea to app in the same session. And it's so easy, anyone can create an application.

When someone creates a Quick App, they are getting a record-centric application with a bunch of additional features including: reporting, document management, collaboration, and audit history. Don't like something? Simply update the quick app using the same easy-to-use wizard and add, update, or remove things as needed.

It's not just quick apps that are designed to accelerate a designer's app development time. The same capabilities that exist in the quick apps designer can be found in our traditional designer as well using the Application builder. Designers can select a basic or full application depending on the amount of customization they want.

KEY FEATURES

- Dedicated Quick Apps Designer
- Rapidly Develop Apps Relatively Risk-Free
- Simple form-based application creation
- Basic and Full Templates for all designers
- Built-in management and governance
- Uses latest features and best practices



QUICK APPS DESIGNER

The Quick Apps Designers provides a safe design experience for non-technical users to create, edit, manage, and delete fully functioning applications. Anyone can build an application using a Quick App. And because it's pretty easy to change or get rid of it if you don't like it; simple go back into the Quick Apps designer and make the change.

USED BY DESIGNERS, TOO

Designers can also create a new application from scratch, but why would they? Designers can shave of hours of development time by simply starting with a template. A basic template is useful when the application being built requires a great deal of configurations. Similarly, a full template application can be used when much of the application will be reused in the final version.

USING THE LATEST FEATURES

One often overlooked feature of quick apps is that their application templates get updated to use the latest features and design patterns. This is especially helpful when you want to learn how to use new features and capabilities.

ENTERPRISE GRADE

Quick Apps (and to some extent the Application Builder, too) fundamentally support Agile development. Designers can go from idea, to iteration, to deployment and determine whether the idea is worth further development.

This would be unacceptable, however, if Quick Apps did not have any governance or restrictions around them. However, administrators can rest assured that application build through and updated in the quick apps designer can always be changed or removed.

THE APPIAN LOW-CODE LIBRARY

Appian's low-code library is designed to help you understand what makes Appian tick. See what makes Appian low-code, and what makes our applications capable of meeting the most demanding enterprise use cases. You can see all this in action and try it out for yourself by enrolling in a free trial: **appian.com/platform/free-trial**

Appian

Appian provides a software development platform that combines intelligent automation and low-code development to rapidly deliver powerful business applications. Many of the world's largest organizations use Appian applications to improve customer experience, achieve operational excellence, and simplify global risk and compliance.
