

Appian for Ministry of Defence (MoD)

TRUST APPIAN FOR THE PROCESS AGILITY TO RESPOND TO EVOLVING GOVERNMENT POLICY

A DIFFERENT APPROACH TO EVOLVING POLICY

The Ministry of Defence (MoD) has spent well over a decade, and billions of pounds, to procure enterprise resource planning (ERP) systems with the hope that they would help the military adopt modern, automated business processes and pave the way to increased enterprise efficiencies. However, these same defence agencies can expect their legacy IT business systems to fall behind at an accelerating rate.

Today's military requires agile solutions that support the modern warfighter and their missions globally. With the size and scope of the MoD ecosystem, the armed forces need technology that can scale. Legacy systems simply were not engineered to handle today's workloads. Although the MoD has made gradual strides toward overhauling its IT systems, greater emphasis should be placed on automation, and the new possibilities that come with emerging technologies.

From budget constraints to rapidly shifting mission objectives, MoD organisations need to fully process data, integrate with existing legacy systems, and effectively communicate with their stakeholders and citizens, while enforcing security, privacy, and regulatory compliance.

MoD personnel are taking on increased workloads, with increased expectations and increased scrutiny, while relying on dated and disconnected technology systems to make it all work. Military leaders and civilians need IT solutions that are flexible and adaptable to rapid change. Under extraordinary budget pressure and public oversight, Defence agencies need to be able to remove some of the complexity often involved in deploying new capabilities. Modern systems should be robust enough to sustain millions of users, while flexible enough to allow development teams to work in parallel and support new ways of doing business.

THE APPIAN ADVANTAGE

The Appian platform provides the most flexible solution for meeting the needs of today's modern MoD. Appian is a business process management-driven application platform that unites all data, processes, and collaborations in one environment. Appian is easily accessible on any mobile device through a simple social interface. Our solution allows organisations to easily combine data from multiple systems and data sources into a single view.

THE APPIAN DIFFERENCE FOR THE MINISTRY OF DEFENCE

- **Business Process Management:** Quickly build solutions through drag-and-drop functionality
- **Dynamic Process Repository:** Capture and store process models for rapid reuse across applications
- **Records:** Converge data from multiple systems into a single, drillable summary for current, complete information
- **Business Rules:** Define and enforce your critical policies and procedures
- **Complex Event Processing:** Track, analyse, and respond to business events
- **Real-Time Visibility:** Provide complete situational awareness of real-time activities and task progress
- **Collaboration:** See alerts in real-time, find collaboration opportunities, and resolve issues, all from an intuitive user interface
- **Enterprise Mobility:** Provide critical stakeholders immediate access to data, activities, and tasking any time on any device
- **Low-Code:** Use drag-and-drop, point-and-click design to launch applications, fast
- **Deployment Flexibility:** Deploy your applications on our UK G-Cloud 10 and DOS3 certified Cloud, or on-premises
- **Secure:** One common platform allows a single login to access hundreds of applications through integration with two factor authentication

Appian delivers a connected enterprise that transforms the MoD work experience, providing exponential savings that liberates resources in support of the armed forces.

Manpower and Personnel Readiness

- Recruiting
- Personnel Administration
- Training Delivery Management
- Talent Management
- Employee and Contractor Onboarding
- Expense and Time Tracking

Logistics and Asset Management

- Asset Data Management
- Fleet and Asset Management
- Field Service Management
- Facilities Management
- Logistics Management
- Mobile Maintenance

Acquisition Management

- Contract Writing
- Acquisition Planning
- Contracts Management
- Purchase Requests
- Invoice Tracking
- Requirements Management
- Contract Portfolio Management

APPIAN DEFENCE CUSTOMERS CAN:

- Create and manage business rules to quickly adapt to evolving policies
- Aggregate processes, data, and users in a single platform
- Stop the cycle of restrictive, time-consuming ERP installations and configuration
- Customise applications without overburdened change management processes
- Reduce time and errors associated with complex administrative processes
- Increase visibility into stove-piped information across the enterprise
- Make more timely, well-informed decisions and take action on real-time, pertinent information
