

SAP Connector

- **Connect** Appian with SAP, easily and securely
- **Execute** SAP BAPI commands in Appian
- **Read** data from SAP on-demand
- **Save** time by leveraging existing SAP libraries

Do you need better visibility and control over your SAP implementations?

Organizations use SAP for a wide variety of reasons. SAP can solve and address many business needs, but it does so in specific ways. Sometimes that is just not enough. Custom applications become necessary to fill the blank spaces not covered by SAP. However, customizing SAP can prove to be frustrating, time consuming, and expensive.

Enter Appian.

Appian provides out-of-the-box SAP connectivity that enhances your existing SAP investments. With Appian, you can help orchestrate, extend, and process-enable SAP actions easily and cost-effectively. Users will be able to obtain necessary data from SAP, without having to switch between systems, and instantly access their work from any browser or mobile device.

The SAP connector uses the SAP JCo 3.0 middleware to connect to SAP ERP systems release 3.1H or later. It allows for remote communication by using Remote Function Calls (RFCs) and invoking SAP functionality on-demand by leveraging Business Application Programming Interfaces (BAPIs).

The SAP connector leverages Appian's Secure Credential store to determine SAP's authentication and permissions for invocation. User-specific or system-wide authentication can be used to ensure maximum flexibility.

Get more out of your SAP investments without the need to customize SAP...with Appian.

Focus on expanding SAP functionality

- Pull SAP into Appian, easily
- Maximize user adoption by exposing relevant SAP data when and where it's needed
- Mobile-enable your SAP experience through Appian
- Control how users interact with SAP with Appian tasks and actions
- Eliminate the need to customize SAP
- Fill functionality gaps not covered by SAP

Focus on integration

- Supports SAP release 3.1H or later
- Connect to any number of SAP instances
- Leverages the SAP JCo middleware library
- Invokes any BAPI exposed in SAP
- Pull & Push data and business objects easily between SAP and Appian
- Create reports combining SAP data and Appian analytics
- Authenticate via system-wide or user-specific credentials

Focus on value

Expand your possibilities by combining Appian with SAP. Quickly create applications that compliment and expand your SAP investments. Process-enable your SAP data and objects and maximize user adoption by creating simple, easy and mobile-enabled applications.
