

Complete Automation

The right approach for any automation need.

Automating your organization is one of the most transformative achievements. However, automation isn't one size fits all. You need the right capabilities to approach any task, end-to-end business process, or application. Only the Appian Low-code Automation Platform provides you with complete automation capabilities to orchestrate people, systems, data, bots, and artificial intelligence (AI) in a single workflow, helping you scale productivity across your enterprise.

Automation capabilities for long-term success.

Workflow - Orchestrate all of your resources into a single workflow, driving productivity and exceptional customer and employee experiences with comprehensive business process management capabilities.

Low-code RPA - Build bots quickly to handle high-volume, repetitive tasks so people can focus on the work that matters most.

Artificial Intelligence - Add intelligence with best-of-breed AI services from Appian or the vendor of your choice to classify documents, extract data, embed next best action, and more.

Low-code Data - Integrate data from anywhere without expensive migrations for unified and actionable data.

Business Rules - Define and automate complex business logic with zero coding.

Case Management - Handle exceptions and ad hoc activities with task management and actionable data views for improved performance.

Scale automation now and into the future.

Don't think of automation as only a short-term fix. Automation can deliver sustainable change and differentiation, helping you build toward the future and transform your organization. Appian aligns your multi-vendor robotic and human workforce, providing the governance and collaboration needed to rapidly scale automation across your enterprise.

Automations span from simple tasks to feature-rich applications that drive organizational transformation.

Any industry, any use case.

Organizations around the world use Appian to create high-impact automations and applications.

Deloitte.

10–15x shorter development cycle vs. legacy platforms—it is very outstanding. I would not be able to achieve what we have achieved with Maestro in terms of automation, AI capabilities, [and a] full feature set without having such short development cycles.

Moutie Wali
Director, Technology Strategy, Telus

Appian RPA has given us not only powerful tools for bot development but also a complete automation platform for workflow management.

Luis González Gugel
Robotics Partner Manager, Deloitte Robotics

We're excited about the speed and scalability that comes from one unified automation stack in the cloud.

Matt Richard
CIO, LIUNA
