Delivering digital transformation at scale

In today’s digital-first world, organizations are seeking new ways to maximize resources and improve business performance. This includes increasing visibility across functional silos and proactively addressing compliance regulations, third-party systems, and business agility.

Together as partners, Appian and Wipro are meeting these challenges and more.

Wipro is enabling digital transformation for customers in various industries. Appian helps organizations build apps and workflows rapidly, with its Low-code Platform. Many of the world’s largest organizations use Appian applications to improve customer experience, achieve operational excellence, and simplify global risk management and compliance.
Automating enterprises together

Wipro and Appian are collaborating to enable enterprises to reimagine their business processes and deliver digital transformation at scale. Appian and Wipro's solutions enable enterprises to maximize business process efficiency by combining people, data, and technology in a single workflow, and ensure their ability to:

- Enhance customer experiences
- Optimize operational performance
- Gain new efficiencies
- More efficiently track and manage risks and compliance requirements

Wipro and Appian's collective approach is built on the intersection of strategy, design, and technology, and our teams have delivered low-code powered process transformation solutions to clients across the financial services, manufacturing, and energy and utilities industries.

Wipro and Appian in action

A global bank decided to grow its use of Excel-based end user computing (EUC) apps across their financial risk department. However, the customer did not account for auditability and traceability, making the business vulnerable to fraud and errors. This was due to manual inputs, regulatory and compliance changes, and lack of forensic and audit capability. An accidental manual error could lead to large fines and overpayment, resulting in billions of dollars in losses and fines.

Using Wipro's EUC remediation framework (governance, people, technology, and process) which includes an automation platform built on Appian, the customer was able to leverage low-code to remediate EUCs into a auditable, traceable, regulation-compliance core IT application, while retaining the flexibility of Excel.

As a result, Wipro's accelerated implementation of the solution was 50% faster than traditional approaches, which allowed the bank to meet its regulatory requirement and avoid millions of dollars in additional fines. Additionally, the customer saved 40% of man-hour during the remediation process.
