Architect Services

What is Architect Services?
Architect Services is a service designed to ensure you get the most from your Appian investment. Our team of experts will provide tailored guidance at every step of your Appian journey, optimizing your solution design, taking advantage of the latest platform capabilities, reducing deployment risks, improving end-user adoption, and managing change.

What are the benefits of Architect Services?
- Minimize risk and maximize the quality of your Appian implementations.
- Ensure maximum stability of the platform and optimize for scale.
- Define the right low-code operating model for your organization.
- Get the most from the platform by adopting the latest features.

What is included in Architect Services?
- **Delivery Assurance:** A structured review process to ensure optimal design and best practice adherence throughout the delivery life cycle.
- **Platform Health:** Proactive monitoring and optimization of your applications by Appian experts.
- **Appian Blueprint:** A framework that helps your team stand up the right governance practices for your program.
- **Expert Guidance:** On-demand, specialized advisory engagements to solve a variety of challenges, including Architecture Planning, Education, Developer Support, and DevOps.

How does Architect Services work?
- Your dedicated Architect Services team is made up of a Success Manager and Appian Architect who understand your unique implementation and are dedicated to your success. They are backed by a team of Appian experts with specialized experience in Appian design, UX, performance, AI, and many other disciplines.
- Your team will meet with you weekly to plan and then execute outcome-based engagements based on your needs.

How do I get started with Architect Services?
Contact success@appian.com or your account representative to learn more about how Appian Architects can help you get the most from your investment in Appian.
