In today’s complex healthcare market, providers need to be on the forefront of easing communications between disparate physician and services groups scattered across various practices and networks.

Whether a caregiver is a part of an integrated delivery network (IDN), where a patient may seek primary care, or a single-physician practice, where the patient may seek a specialist’s treatment, all need to be able to visualize how they are treating their mutual patient in order to provide the best quality of care. Oftentimes, providers are on distinctly different electronic medical records (EMRs) systems, making the communication process cumbersome and frustrating for the patient.

What if physicians were enabled with a technology that could close the loop between groups?

With this accomplished, referrals and follow-ups would be simplified, and quality of care improved, easing the minds of both the caregivers and their patients. And, there is no reason that this same technology could not provide valuable insights for an IDN itself, aggregating data that could examine a physician’s financial performance, his patient’s satisfaction, accuracy in diagnoses, federal and state regulation compliance and more. What if this same tool were also able to aid the larger IDNs with predictive analytics that enabled them to better anticipate physician retention issues that many health systems face?

Enter Appian.

With the Appian unified application platform, powered by Business Process Management and Case Management capabilities, ambulatory provider management goals, and much more, become achievable. IDNs are easily able to work across their organization and with outside providers to give their patients the highest quality of care.

The Appian solution provides for segregation of duties so caregivers can access the appropriate patient information they need, and nothing more. Plus, physicians from individual practices and those employed by provider healthcare systems or IDNs are able to more easily collaborate in order to provide the best healthcare experience possible.

Appian ensures an integrated approach that leverages current technology investment. IDNs are able to work not only with their latest and greatest cutting-edge systems, but also with their legacy ones, eliminating the need for a costly “rip and replace” approach.
Appian delivers an enterprise platform for digital transformation in healthcare that enables payers and providers to bridge core systems, enhance member experience, and significantly improve patient outcomes. Powered by industry leading Business Process Management (BPM) and Case Management capabilities, Appian’s low-code approach can radically accelerate the time it takes to build and deploy powerful, modern applications, on-premises or in the cloud. The world’s most innovative organizations use Appian to reinvent their customer experience, transform their business operations, and master governance, risk and compliance.
